

Problem: DAE error -1107 encountered

Solution: The -1107 error is fixed by opening going to the APPLE in the upper left-hand corner of the screen, choose sound control panel, switch the output from "digidesign" to "built-in." Restart the computer (it works every time). That particular fix is direct from DigiDesign, so it doesn't make sense why it works, but it does...This seems to be the most common error on the systems and is pretty easy to correct.
